Planting and care

They are usually shipped in the spring as bare roots when plants are fully dormant, well before they have leafed out. Theyâ€™ll look like a bundle of sticks on arrival. Note, they are not deadâ€™simply dormant.If you are buying container-grown plants (vs. bare-root plants), plant them by May or early June for best results.

Sunlight: Full sun to part shade

Soil: well-drained soil that are loamy sandy and averagely mild can suit its growth.

Water: Medium

Temperature: 65 F

Fertilizer: Apply any organic fertilizer

Caring for Sem phali

- To help conserve water, reduce stress, and encourage healthy growth, apply a 2- to 4-inch layer of chopped and shredded leaves, grass clippings, or shredded bark around the base of your plants.
- Allow about an inch of space between the mulch and the base stem of the plant.

Harvesting

November to january
