Description A beautiful, large leaved, naturally well shaped tree that offers dense shade. Grows at about 1 ft/yr to 30 ft. Berries are mildly sweet, reminiscent of watermelon. This is the mulberry used to feed silkworms. Birds love the berries.

Common name: Russian Mulberry

Color: black, purple, red,

Bloom time: Summer

Height: 10-12 ft

Difficulty level: easy to grow

Planting & Care

Choose a warm, sheltered location when growing plant. The vining varieties require a support structure as some can get 15 feet tall. All plants prefer sun to light shade sites with well-draining and moderately fertile soil. Install the plant in the ground at the same level it was growing in the nursery pot.

Sunlight: Full Sun to Partial Shade

Soil: well-drained soil

Water: medium

Temperature: always >5deg

Fertilizer: Apply any organic fertilizer

Care:

- Plant mulberries in spring as the soil warms up.

Care:

- Leave the foliage until it turns brown in the fall.
- This is important so that the plant stores energy for next year's flowering.
- Cut down the dead stalks in the late fall or early spring.
-

Special Feature:

The closely toothed margin and long drooping catkins distinguish it from White Mulberry. Male catkins are 5-10 cm long including a slender 1.5 cm long, velvety stalk, densely hairy. Female catkins are cylindrical, 5-12 cm long including 2 cm long stalk, pendulous, Use

Note:

for medicinal use, please consult appropriate doctor before use.
