Description 'Sunshine Superman' may be grown and or propagated from seed, and may self-seed in the garden. Plants of this new variety are not reliably winter hardy throughout USDA Zone 5.

**Common name:** Coreopsis pubescens Sunshine Superman

**Color:** Yellow

**Bloom time:** June to September

**Height:** 0.75 to 1.00 feet

**Difficulty level:** easy to grow

**Planting & Care**

plant care may require a bit of effort, but the results are well worth the work. Not all plants are fragrant, but the most common and hardy do produce a sweet, carrying fragrance. Common is a vine and has larger glossy green leaves than Royal. Both can survive in temperate climates if they are planted in a sheltered area.

**Sunlight:** Full sun

**Soil:** well-drained soil

**Water:** Dry to medium

**Temperature:** 68°F

**Fertilizer:** Apply any organic fertilizer

**Care:**

- After a good rain, find a spot that is the first to dry out.
- Water trapped beneath the scales may rot the bulb, so a well-drained site is essential.
- Also, select a site that gets full sun.
- For dependable blooms, plants need six to eight hours of direct sunlight a day.
-

**Harvesting:** 2 weeks

**Care:**

- Clean away from around the base of the rosebushes any trimmed debris that can harbor disease and insects.
- Late in the season, stop deadheading rugosas so that hips will form on the plants; these can be harvested and dried on screens, away from sunlight, then stored in an airtight container.
- 

**Special Feature:**

Borders. Also effective in naturalized areas, meadows, prairies or cottage gardens. Good plant for areas with poor, dry soils.  
Use

**Note:**

for medicinal use
