Sterculia foetida is a soft wooded tree that can grow up to 115 feet tall. It was described in 1753 by Carolus Linnaeus. Common names for the plant are the bastard poon tree, java olive tree, hazel sterculia, and wild almond tree.

Common name	Flower colours	Bloom time	Height	Difficulty
Sterculia Foetida, Jungli Badam,bastard poon tree, java olive tree, hazel sterculia, Wild Almond Tree, Vitkhadirah,Poothiyunarthty, Pinar,Pottakkavalam,Peenar i,Malambarathy,Kutiraippituku,Kelumpang jari, Kelumpang, Kepoh,Skunk tree,Xiang ping po,Australian flame tree, bangar nut,skunk tree, star chestnut,kalumpang,arbre puant,olive de Java, olivier putois,kabu kabu, kepoh,castanha da Índia, chichã , chichãj fedorento, oliva de java,ana cagãita, olivo de Java,chammahong, homrong, samrong ,gorapu badam, pee, pottaikavalam,	green	Rarely flowers indoors	50.00 to 100.00 feet	easy to grow

GewÄhnlicher Stinkbaum .

Planting and care

Choose a warm, sheltered location when growing. The vining varieties require a support structure as some can get 15 feet tall. All plants prefer sun to light shade sites with well-draining and moderately fertile soil. Install the plant in the ground at the same level it was growing in the nursery pot.

Sunlight	Soil	Water	Temperature	Fertilizer
Part shade	well-drained soil	Medium	18 - 32Åc	Apply any organic fertilizer

Caring for *Sterculia Foetida*

- plant care is not difficult but does require vigilance.
- The vines need to be trained early when they are young.
- You may use plant ties or just weave them through trellis sections.
