- Height of the container : Approx. 4 Inches
- Width of the container: Approx. 2.5 Inches
- Material of the container: Glass

Syngonium Variegated - Micro Garden is a collection of small plants growing in a sterile container having specialised growth medium. This micro garden contains bottle container with beautiful tiny plants that can be used for ornamental purposes.

Keep them indoors (16 - 26 degree celsius) under bright fluorescent light and watch them grow inside the glass bottle.

This micro garden is best suited for indoor (16 - 26 degree celsius) bright light air conditioned environment and remains healthy 3-4 months. However, this micro garden can also be placed slightly warmer rooms with bright fluroscent light for shorter duration (1 - 2 Month).

Once the plants in the microgarden out grows the bottle they can be transplanted in the cocopeat first and later on to the pots having soil.

## Benefits of Syngonium variegated - Micro Garden

- You get beautiful varigated syngonium plants growing in specialised medium in a glass bottle.

## Caring for Syngonium variegated - Micro Garden

- Do not open the lid of the bottle.
- Do not remove the cling wrap and keep the bottle upright always.
- Keep the bottle in bright location under fruroscent light (Tube lights, White bulbs, LED bulbs etc.)
- Try to keep the bottle closer to the fluroscent light (Tube lights, White bulbs, LED bulbs etc.)
- Do not keep the bottle in direct sunlight to avoid drying of the plant.
- This Micro Garden does not contain soil and does not require watering till it is inside the bottle.

## Process of transplanting plants from Syngonium variegated - Micro Garden

1. Once the plants grow in bottles for 2-4 months or they start out growing in the bottle, they can be transplanted in other pots.
2. Open the lid of the bottle and take out the plant carefully without damaging the roots.
3. Clean the roots for any leftover medium gently with the help of tissue paper.
4. Take a small pot (Approx. 3inch upeer diameter) or seedling tray and fill with cocopeat.
5. Make some space in the cocopeat with finger and plant the seedling.
6. Apply water sparingly.
7. Keep this set up in bright, warm, slightly humid location away from the direct sunlight for 8-10 days.
8. Once the plant is acclimatized i.e. it is adjusted to the outer environment, you can repot it in larger size pot having soil mix medium.
