Description

Description for Tagar Double

Easily grown in average, moist, acidic, well-drained soils in full sun to part shade. Winter hardy to USDA Zones 7-9. May be attempted in protected locations in Zone 6. Plants usually die to the ground in the cold winter climates of Zones 5 and 6, but may send up new shoots from the roots the following spring.

Common name Abelia chinensis, Caprifoliaceae, Alcea rosea, Malvaceae, Double Hollyhock. Alcea rosea, Malvaceae	Flower colours White	Bloom time July to September	Height 5.00 to 8.00 feet	Difficulty easy to grow
---	-------------------------	---------------------------------	-----------------------------	----------------------------

Planting and care

The vining varieties require a support structure as some can get 15 feet tall. All plants prefer sun to light shade sites with well-draining and moderately fertile soil. Install the plant in the ground at the same level it was growing in the nursery pot. Most plants are grafted onto the common rootstock because of its superior hardiness.

Sunlight Full sun to part shade	Soil well-drained soil	Water Medium	Temperature 13 to 24 (Å°C)	Fertilizer Apply any organic fertilizer
------------------------------------	---------------------------	-----------------	-------------------------------	--

Caring for Tagar Double

Deadhead religiously and keep beds clean. Every leaf has a growth bud, so removing old flower blossoms encourages the plant to make more flowers instead of using the energy to make seeds. Clean away from around the base of the rosebushes any trimmed debris that can harbor disease and insects.

Typical uses of Tagar Double

Special features: Specimen, group or mass. Border, foundation or hedge. Site in areas where the flowers and fragrance plus the visiting butterflies may be easily observed. Straight species is infrequently marketed in commerce.

Ornamental use: The plant is used for ornamental purpose.
