Tagar Variegated Plant

Description for Tagar Variegated

Plant height: 14 - 22 inches

Plant spread: 4 - 8 inches

Best grown in dry to medium, well-drained soils in full sun to part shade. Must have sharply drained soils. Plants generally have good drought tolerance, but appreciate some moisture in dry summer periods. Wet soils in winter can be fatal.

Common name(s): Tagar

Flower colours: White

Bloom time: June to July

Max reachahle height: 2 to 3 feet

Difficulty to grow:: Easy to grow

Planting and care

Growing your plants in containers provides you with a few options that are unavailable to permanent plantings. The ability to move the containers around is perhaps the biggest advantage.

Sunlight: Full sun to part shade

Soil: Well-drained soil

Water: Dry to medium

Temperature: 13 to 24 degrees C

Fertilizer: Apply any organic fertilizer

Caring for Tagar Variegated

As the seasons and the sun s position changes, you can move your plant to a sunnier or shady spot to fit the cultural needs of the plant. You will also be able to move plants into the limelight when they come into bloom

Typical uses of Tagar Variegated

Special features: Interesting variegated perennial for use as specimen or in groups. Borders. Containers.

Ornamental use: The plant is used for ornamental purpose.

Medicinal use: They are used in Ayurvedic medicine and the tradional medicine of South East Asia, the Malay Peninsula, Indonesia, and Ambon Island.
