### Description

Tamarind is a leguminous tree in the family Fabaceae indigenous to tropical Africa. The genus Tamarindus is a monotypic taxon, having only a single species.

**Common name:** tamarind

**Color:** pale yellow

**Bloom time:** May to August

**Height:** 40.00 to 60.00 feet

**Difficulty level:** easy to grow

### Planting & Care

plant care may require a bit of effort, but the results are well worth the work. Not all plants are fragrant, but the most common and hardy do produce a sweet, carrying fragrance. Common is a vine and has larger glossy green leaves than Royal. Both can survive in temperate climates if they are planted in a sheltered area.

**Sunlight:** Full sun

**Soil:** well-drained soil

**Water:** Medium

**Temperature:** 28 degree F

**Fertilizer:** Apply any organic fertilizer

### Care:

- After a good rain, find a spot that is the first to dry out.

- Water trapped beneath the scales may rot the bulb, so a well-drained site is essential.
- Also, select a site that gets full sun.
- For dependable blooms, plants need six to eight hours of direct sunlight a day.
- 

**Harvesting:** It is normally growing as a wild species.

**Care:**

- Clean away from around the base of the rosebushes any trimmed debris that can harbor disease and insects.
- Late in the season, stop deadheading rugosas so that hips will form on the plants; these can be harvested and dried on screens, away from sunlight, then stored in an airtight container.
- 

**Special Feature:**

Shade tree and/or fruit tree. Landscape specimen/accent but needs a big space. Residential street tree. Parking lot islands. Parks. Use

**Medicinal use:**

- Tamarindus [Tamarindus indica L.
- (T.
- indica)], belongs to the family Leguminosae (Fabaceae), commonly known as Tamarind tree, is one of the fruit tree species that is used as traditional medicine.

**Note:**

for medicinal use
