Description Winter hardy to USDA Zones 10-12 where it is best grown in acidic, fertile, sandy, moist, well-drained soils in full sun. Tolerates a wide range of soils. Established trees have good drought tolerance. Intolerant of frost. Propagate by suckers or seed.

Common name: Tectona grandis

Color: White

Height: June to August

Difficulty level: easy to grow

Planting & Care

After a good rain, find a spot that is the first to dry out. Water trapped beneath the scales may rot the bulb, so a well-drained site is essential. Also, select a site that gets full sun. For dependable blooms, plants need six to eight hours of direct sunlight a day.

Sunlight: Full sun

Soil: well-drained soil

Water: Medium

Temperature: 18–28°C

Fertilizer: Apply any organic fertilizer

Care:

- plant care may require a bit of effort, but the results are well worth the work.
- Not all plants are fragrant, but the most common and hardy do produce a sweet, carrying fragrance.
- Common is a vine and has larger glossy green leaves than Royal.
- Both can survive in temperate climates if they are planted in a sheltered area.
-

Care:

- Clean away from around the base of the rosebushes any trimmed debris that can harbor disease and insects.
- Late in the season, stop deadheading rugosas so that hips will form on the plants; these can be harvested and dried on screens, away from sunlight, then stored in an airtight container.
-

Special Feature:

Shade tree or lawn specimen for large landscapes. Residential street tree. Timber.

Use

Medicinal use:

- As a laxative, for piles, leucoderma, dysentery, headache, burning pain over the region of the liver; expels worms from the body; is an expectorant; cures inflamed eyelids, inflammatory swellings, indigestion, discomfort or pain with burning in the stomach; and removes itchiness of the skin.

Note:

for medicinal use
