Description

Description for Tecoma (Shrub, Orange)

Tecomaria capensis is an ornamental garden plant commonly used for screening and decorative purposes. It can also be trimmed to form a hedge. It is often planted specifically to attract birds and butterflies. The powdered bark of this attractive garden plant is used as a traditional medicine to relieve pain and sleeplessness.

Common name	Flower colours	Bloom time	Height	Difficulty
Tecoma (Shrub, Orange),Cape Honeysuckle ,Bignoniaceae,yellow trumpetbush, yellow bells, yellow elder, ginger thomas.	orange	Early summer	8 to 10 .	Easy to grow

Planting and care

Prepare soil for desert-adapted plants. Plant from transplant in spring. If planted in native soil without amendments, youâ€™ll find itâ€™s more tolerant of infrequent waterings. Those planted in richer soil would prefer more water. This upright shrub will grow up to 12 feet tall and spread up to 8 feet wide.

Sunlight	Soil	Water	Temperature	Fertilizer
Full Sun	well-drained soil	medium	0Å° to 5Å° F,	Apply any organic fertilizer

Caring for Tecoma

- Orange Jubilee is outstanding grown as a single specimen or harmonious when grown with other water-saving plants to create a mini,

subtropical oasis.

- As a screen to cover a drab block wall or shade a west-facing window, or as a focal point to add drama, this plant wonâ€™t disappoint.

Typical uses of Tecoma

Special features:

Culinary use: leaves

Ornamental use: The plant is used for ornamental purpose

Medicinal use: relieve pain
