Description

Description for Vitex Negundo, Nirgundi Seeds

Vitex negundo, commonly known as the Chinese Chastetree, five-leaved chaste tree, or horseshoe vitex, is a large aromatic shrub with quadrangular, densely whitish, tomentose branchlets. This plant can grow up to 4-meter height. Plants bear a purple showy flower year round and the inflorescence is terminal and axillary. Fruits are small black color berry.

This plant has compound leaves which consist of five leaflets. Upper leaves surface is green and lower surface is the grey color. This plant is very drought tolerant in nature.

Common name	Flower colours	Bloom time	Height	Difficulty
Chaste tree, Nirgundi, Five-leaved chaste tree, or Horseshoe vitex	Purple	June to August	Up to 4 m	Easy to grow

Planting and care

This plant is propagated by the seeds. Best suitable sowing time is monsoon season. Grow well in full to partial sunlight. You can plant into the pot or container using the potting mix as the soil, coco peat, and vermicompost.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun	Well-drained sandy loam soil	Moderately	20 to 30 degrees C	Apply any organic fertilizer

Caring for Vitex Negundo

- Watering should be done early in the morning if the soil is dry.

- Avoid overwatering.
- You can prune the plant in the spring season to maintain the bushy.
