|--|-------------------------|--------------------------------|-----------------------------|----------------------------|
| Common name satavar, shatavari, or shatamull | Flower colours White | Bloom time Seasonal bloomer | Height 2.00 to 3.00 feet | Difficulty easy to grow |
|--|-------------------------|--------------------------------|-----------------------------|----------------------------|

Planting and care

It is propagated by root suckers or seeds.

The soil is prepared well by digging up to 15 cm depth. The field is divided into convenient sized plots and laid out into ridges at 60 cm apart. Well developed root suckers are planted on the ridges.

Caring for Wild Asparagus

- Generally, the crop prefers lateritic, red loamy soils, with adequate drainage.
- The crop survives under varied agro-climatic conditions ranging from temperate to tropical hill regions.
- It tolerates drought as well as low temperature.

Typical uses of Wild Asparagus

Special features: No serious pest and disease has been noticed in this crop.

Ornamental use: The plant is used for ornamental purpose.

Medicinal use: for the prevention and treatment of gastric ulcers and dyspepsia, and as a galactagogue. For nervous disorders. It is generally used as a uterine tonic, to improve breast milk, in hyperacidity, and as a best general health tonic.
