Description

Description for null

It is widely used as a house plant because it bears all conditions of cultivation.

It does have pinnate leaves like a palm tree, but they are rounded and it has a thick tuberous stem.

It satisfies demand of interior plant escapers who always look for new plants they can use indoors to provide a different look.

The evergreen leaflets grow in opposing pairs of up to 12 per stem.

It is a low growing plant. The trunk stores moisture in times of drought, which makes Zamia ideal for periscope gardens.

Common name	Flower colours	Bloom time	Height	Difficulty
ZZ Plant, Aroid Palm	Bright yellow to brown or bronze spadix	Midsummer to early autumn	3 to 4 feet	Easy

Planting and care

It is normally evergreen, but becomes deciduous during drought, surviving drought due to the large potato-like rhizome that stores water until

rainfall resumes.

The leaves are pinnate, 40 to 60 cm long, with 6-8 pairs of leaflets 7 to 15 cm long; they are smooth, shiny, and dark green.

The flowers are produced in a small bright yellow to brown or bronze spadix 5 to 7 cm long, partly hidden among the leaf bases; flowering is from mid summer to early autumn.

Sunlight	Soil	Water	Temperature	Fertilizer
Moderate to bright light	Good well-drained potting soil	Medium	Minimum 18 degrees C	Fertilize with a slow release palm food or a diluted household plant food once monthly during the growing season.

Caring for Zamioculcas Zamiifolia

- Cardboard palm requires enough moisture to keep the trunk fat and healthy. Never let it dry to the point that the trunk and stem are wrinkled or dry.
- Prune off dead leaves as they occur.
- Even though the plant does well in lower light levels, by placing it in brighter light it performs even better.
- Keep the plant away from any hot direct afternoon sun as the plant can burn. A good bright filtered afternoon sun would work well.

Harvesting

NA

Typical uses of Zamioculcas Zamiifolia

Special features: Stemless evergreen plant

Culinary use: NA

Ornamental use: It makes an excellent container or house plant anywhere.

In temperate regions it is commonly grown as a house plant and, in subtropical areas, as a container or bedding plant outdoors.

Medicinal use: NA
